Environmental

Preparing the workshop · *Wellbeing & quality of life index*

G4 · Proof of Sustainability

Why this tool matters

Acknowledging that a city's success is not measured in concrete poured or capital accumulated, but in the everyday health, joy, and security of its inhabitants.

Evidence we produce

A structured, data-driven index combining objective indicators (e.g., air quality, housing) and subjective indicators (e.g., life satisfaction, civic trust) to evaluate the true prosperity of a city.

Duration & Material

Duration · 3 to 6 months for data collection and baseline index creation

Material · Standardized indicator frameworks (OECD, BES), municipal data, survey software

Reference case

The implementation of indicators for the assessment of urban quality of life in Saudi cities, where frameworks define specific criteria (like housing, transport, and safety) to tangibly measure and improve the living conditions of the population. Similarly, in Italy, the BES (Equitable and Sustainable Well-being) index is used to measure social, environmental, and economic aspects alongside GDP to guide policy.

Suggested agenda · Brief (10 min) > Method walk-through (15 min) > Animation canvas (60-90 min) > Harvest (20 min)

Wellbeing index · 8 domains × subjective + objective

Duration
3 to 6 months for data collection and baseline index cr...

Domain × indicator scoring

Domain	Objective	Subjective
Health		
Education		
Income		
Housing		
Environment		
Social ties		
Safety		
Time use		

Harvesting our *learnings*

After running the canvas, capture three layers of insight.

What inspires me

Stand-out signals, surprising stories, ideas to remember

How to apply it here

Concrete adaptations to our context, our team, our constraints

What we need to be autonomous

Skills, allies, resources, decisions still to secure

Each participant fills a copy. Then debrief together to surface patterns and next steps.
