Preparing the workshop · *Heritage inventories*

G1 · Proof of Impact

Why this tool matters

Naming and claiming the built environment; proving that every historic stone and forgotten facade has a recorded value that demands respect from the administration.

Evidence we produce

A structured, geographical database detailing the physical characteristics, historical significance, and current structural condition of cultural assets across a territory.

Duration & Material

Duration · 6 months to several years depending on the territorial scale

Material · Standardized field survey forms, GIS mapping software, historical archives

Reference case

The Arches Heritage Inventory and Management System is an open-source software developed specifically to compile and manage inventories of immovable cultural heritage. It uses semantic technologies and international standards (CIDOC CRM) to create comprehensive, GIS-based heritage databases that improve the management of historical assets at national or city scales.

Suggested agenda · Brief (10 min) > Method walk-through (15 min) > Animation canvas (60-90 min) > Harvest (20 min)

Three inventories · architectural · archaeological · landscape

Duration
6 months to several years depending on the territorial...

Architectural

buildings, façades, ensembles

Risks

Cross-reference the three inventories to detect overlap, gaps, and competing values.

Harvesting our *learnings*

After running the canvas, capture three layers of insight.

What inspires me

Stand-out signals, surprising stories, ideas to remember

How to apply it here

Concrete adaptations to our context, our team, our constraints

What we need to be autonomous

Skills, allies, resources, decisions still to secure

Each participant fills a copy. Then debrief together to surface patterns and next steps.
