Preparing the workshop · *Development appraisal / Bilan d'aménagement*

G2 · Proof of Fit

Why this tool matters

Forcing the rigid mathematics of real estate to account for the living world, proving that protecting a wetland or building a community center is not a sunk cost, but a profound civic investment.

Evidence we produce

A comprehensive spreadsheet combining standard financial metrics (capital expenditures, expected revenues) with quantified socio-ecological returns (avoided costs, carbon reduction, social value).

Duration & Material

Duration · 4 to 8 weeks

Material · Financial modeling software, willingness-to-pay databases, local real estate market data

Reference case

In France, the traditional financial balance of urban planning ("bilan d'aménagement") is increasingly being transformed into a "global socio-ecological yield" tool. By moving beyond mere financial equilibrium, institutions like Caisse des Dépôts assess avoided costs and environmental benefits, shifting the perspective of urban development from pure profitability to measuring the true value delivered to the community.

Suggested agenda · Brief (10 min) > Method walk-through (15 min) > Animation canvas (60-90 min) > Harvest (20 min)

Land residual value · GDV – costs – margin

Duration
4 to 8 weeks

GDV (gross development value)

sale prices $\times$ *area built*

Build costs

construction · fees ·
contingency

Soft costs

finance · marketing · taxes

Profit margin

risk-adjusted · 15-25%

what we can pay for the land

Harvesting our *learnings*

After running the canvas, capture three layers of insight.

What inspires me

Stand-out signals, surprising stories, ideas to remember

How to apply it here

Concrete adaptations to our context, our team, our constraints

What we need to be autonomous

Skills, allies, resources, decisions still to secure

Each participant fills a copy. Then debrief together to surface patterns and next steps.
