

# EU Taxonomy sustainability screening

**What this tool produces** · *A technical screening report proving the project substantially contributes to at least one taxonomy objective while passing the "Do No Significant Harm" (DNSH) criteria for the remaining five.*

**G2 · Proof of Fit**

**G4 · Proof of Sustainability**

**Dimensions**

**Regulation**

**Economic**

**Environmental**

# Preparing the workshop · *EU Taxonomy sustainability screening*

## G2 · Proof of Fit

### Why this tool matters

Eradicating greenwashing through the uncompromising precision of law, forcing capital to prove its ecological allegiance through hard metrics rather than glossy brochures.

### Evidence we produce

A technical screening report proving the project substantially contributes to at least one taxonomy objective while passing the "Do No Significant Harm" (DNSH) criteria for the remaining five.

### Duration & Material

Duration · 4 to 8 weeks

Material · EU Taxonomy Delegated Acts, LCA data, environmental impact assessments, EPC certificates

### Reference case

When assessing the construction of new buildings or civil engineering works, developers heavily utilize the EU Taxonomy Technical Screening Criteria to demonstrate strict alignment. For example, a project must mathematically prove that at least 70% of construction and demolition waste is prepared for reuse or recycling (Circularity) and that primary energy demand falls below specific national thresholds to qualify as a sustainable investment under the Disclosures Delegated A...

**Suggested agenda** · Brief (10 min) > Method walk-through (15 min) > Animation canvas (60-90 min) > Harvest (20 min)

# 6 environmental objectives × DNSH × minimum safeguards

Duration  
4 to 8 weeks

|                                                                                 |                                                                                   |                                                                                |
|---------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|--------------------------------------------------------------------------------|
| <div>Climate change mitigation</div> <div>emissions reduction</div> <div></div> | <div>Climate change adaptation</div> <div>resilience to climate</div> <div></div> | <div>Water &amp; marine resources</div> <div>sustainable use</div> <div></div> |
| <div>Circular economy</div> <div>resource efficiency</div> <div></div>          | <div>Pollution prevention</div> <div>air · water · soil</div> <div></div>         | <div>Biodiversity protection</div> <div>ecosystems · species</div> <div></div> |

Substantial contribution to ≥ 1 objective + DNSH on all 6 + minimum safeguards.

# Harvesting our *learnings*

*After running the canvas, capture three layers of insight.*

**What inspires me**

*Stand-out signals, surprising stories, ideas to remember*

---

---

---

---

---

---

---

---

**How to apply it here**

*Concrete adaptations to our context, our team, our constraints*

---

---

---

---

---

---

---

---

**What we need to be autonomous**

*Skills, allies, resources, decisions still to secure*

---

---

---

---

---

---

---

---

*Each participant fills a copy. Then debrief together to surface patterns and next steps.*
