G2 · Proof of Fit

Why this tool matters

Tearing down invisible walls; guaranteeing that every resident, regardless of their physical ability or address, holds a rightful, unimpeded passport to navigate the entirety of their city.

Evidence we produce

A spatial network analysis detailing pedestrian movement paths, intersection densities, and visual connections between key functional and cultural landmarks,.

Duration & Material

Duration · 3 to 6 weeks of network modelling and field validation

Material · GIS software, mobility tracking data, viewshed analysis tools (e.g., CityEngine)

Reference case

During the spatial assessment phase of the Our City Plans methodology by UN-Habitat, teams analyzed the aggregation of landmarks and the conjunction of paths to identify key mobility nodes. By mapping areas where infrastructure capacity clashed with actual land occupation, they were able to target precise, incremental interventions to drastically improve pedestrian connectivity,.

Suggested agenda · Brief (10 min) > Method walk-through (15 min) > Animation canvas (60-90 min) > Harvest (20 min)

Five mobility lenses

Duration
3 to 6 weeks of network modelling and field validation

Walking

sidewalks, ramps, shade

Cycling

lanes, parking, safety

Public transport

frequency, coverage, fares

Cars

flow, parking, calming

Logistics

deliveries, services

Rate each lens · 1 (poor) → 5 (excellent). Surface trade-offs.

Harvesting our *learnings*

After running the canvas, capture three layers of insight.

What inspires me

Stand-out signals, surprising stories, ideas to remember

How to apply it here

Concrete adaptations to our context, our team, our constraints

What we need to be autonomous

Skills, allies, resources, decisions still to secure

Each participant fills a copy. Then debrief together to surface patterns and next steps.
