G1 · Proof of Impact

Why this tool matters

Exposing the hidden mathematical skeleton of the city; proving that human movement is not random, but deeply guided by the invisible geometry of the streets we build.

Evidence we produce

Topological graphs and color-coded maps quantifying the "closeness" and "betweenness" of every street, mathematically predicting where pedestrian flows and economic vitality will naturally concentrate.

Duration & Material

Duration · 2 to 4 weeks of data processing and modeling

Material · GIS street networks, Space Syntax software (Depthmap, sDNA), land-use databases

Reference case

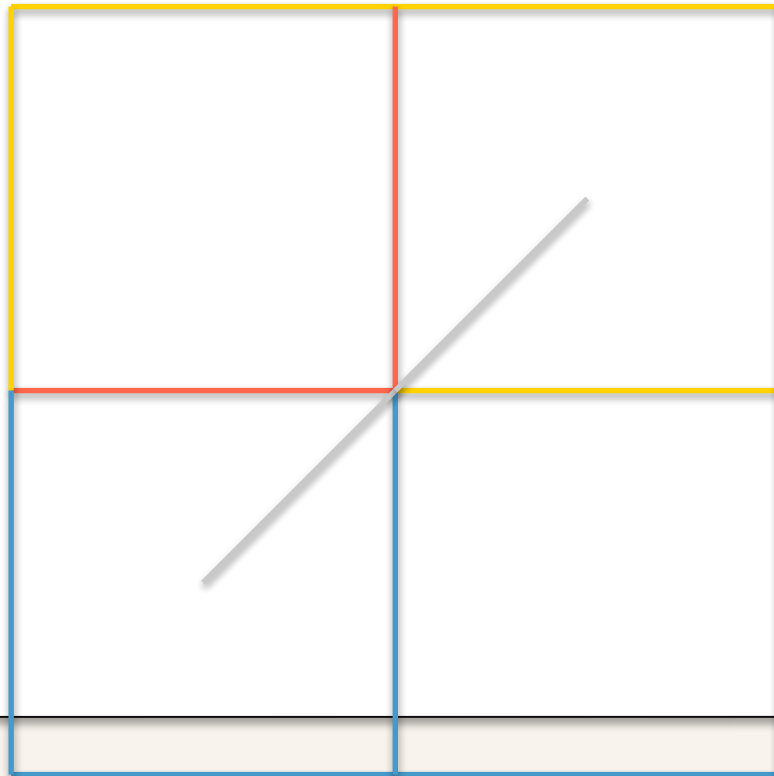

Researchers analyzing the Kadıköy Region in Istanbul combined Space Syntax metrics (like street centrality and angular closeness) with GIS-based built-environment measures. By mathematically calculating the structural properties of the street network, they were able to precisely interpret and compare the determinant factors driving actual pedestrian volumes and land-use activities across different zones.

Suggested agenda · Brief (10 min) > Method walk-through (15 min) > Animation canvas (60-90 min) > Harvest (20 min)

Axial map · integration · choice · depth

Duration
2 to 4 weeks of data processing and modeling

Axial map abstraction

Legend

-  **Integration (high)**
-  **Integration (medium)**
-  **Integration (low)**
-  **Choice (cul-de-sac)**

Harvesting our *learnings*

After running the canvas, capture three layers of insight.

What inspires me

Stand-out signals, surprising stories, ideas to remember

How to apply it here

Concrete adaptations to our context, our team, our constraints

What we need to be autonomous

Skills, allies, resources, decisions still to secure

Each participant fills a copy. Then debrief together to surface patterns and next steps.
