G2 · Proof of Fit

Why this tool matters

Transforming the fear of the unknown into a shared, rationalized cartography of vulnerabilities, acknowledging that while we cannot control the future, collective preparation is a public good.

Evidence we produce

A categorized matrix that lists potential adverse events, scores their probability and severity, and explicitly assigns the mitigation responsibility to the public partner, private partner, or both.

Duration & Material

Duration · 1 to 2 weeks for data gathering; 1-day expert workshop to score and allocate

Material · Past project data, risk categorization templates, probability/severity scoring grids

Reference case

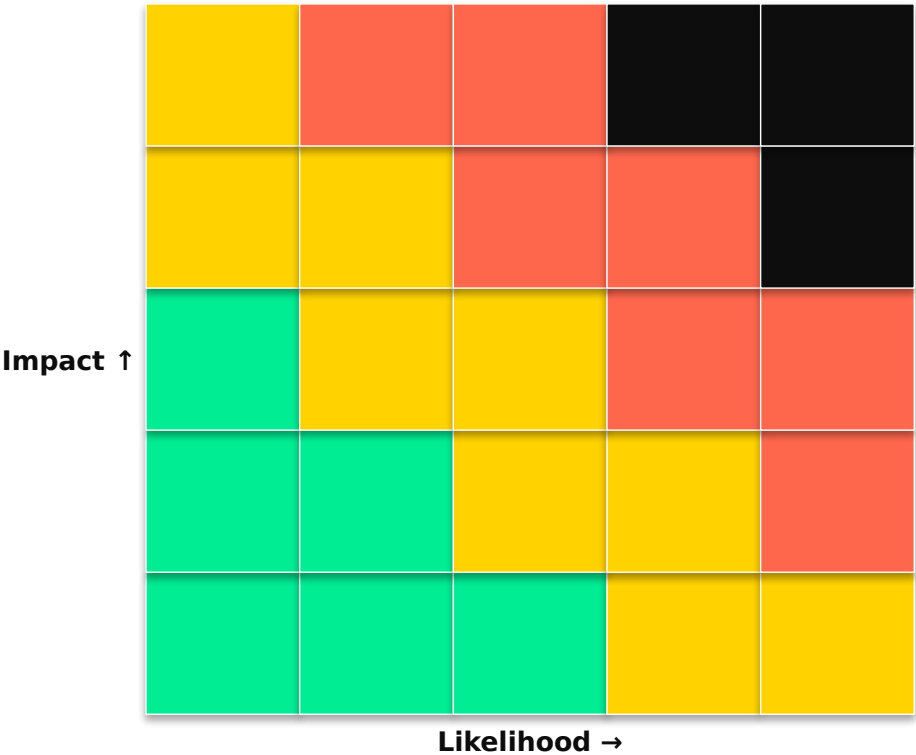

In large-scale infrastructure investments evaluated by the European Commission, building a qualitative risk matrix enabled project promoters to foresee "catastrophic" variables like construction cost overruns or demand shortfalls, leading to targeted mitigation measures before finalizing the financial model. Similarly, the EBRD advises using risk matrices in public-private partnerships to effectively assign responsibilities, such as placing land acquisition risks on the publ...

Suggested agenda · Brief (10 min) > Method walk-through (15 min) > Animation canvas (60-90 min) > Harvest (20 min)

Risk register · likelihood × impact

Duration
1 to 2 weeks for data gathering; 1-day expert workshop...

Heatmap

Top 8 risks

- R1 _____
- R2 _____
- R3 _____
- R4 _____
- R5 _____
- R6 _____
- R7 _____
- R8 _____

Harvesting our *learnings*

After running the canvas, capture three layers of insight.

What inspires me

Stand-out signals, surprising stories, ideas to remember

How to apply it here

Concrete adaptations to our context, our team, our constraints

What we need to be autonomous

Skills, allies, resources, decisions still to secure

Each participant fills a copy. Then debrief together to surface patterns and next steps.
