Why this tool matters

Forcing administrative logic to place a tangible value on human and environmental wellbeing, ensuring that clean air and community health carry the same weight as concrete and steel in the eyes of investors.

Evidence we produce

An economic appraisal report featuring the Economic Net Present Value (ENPV) and a Benefit-Cost Ratio, demonstrating the project's financial viability and societal worth.

Duration & Material

Duration · 4 to 8 weeks of financial modeling

Material · Financial spreadsheets, willingness-to-pay databases, standard conversion factors

Reference case

The European Investment Bank applies Cost-Benefit Analysis across its transport and urban projects to measure the true value added to society, moving beyond mere financial returns. In the historic oldtown of Lisbon, a CBA justified a complex urban regeneration intervention by monetizing the lower social costs (unemployment reduction) and better living environments against the heavy improvement and relocation costs.

Suggested agenda · Brief (10 min) > Method walk-through (15 min) > Animation canvas (60-90 min) > Harvest (20 min)

Costs vs benefits · monetized × time-discounted

Duration
4 to 8 weeks of financial modeling

Costs

Capital expenditure

Operating costs

Maintenance

Externalities (negative)

Risks & contingencies

Benefits

User benefits

Avoided costs

Tax revenues

Externalities (positive)

Strategic value

Discount rate · base year · sensitivity tests · clearly stated.

Harvesting our *learnings*

After running the canvas, capture three layers of insight.

What inspires me

Stand-out signals, surprising stories, ideas to remember

How to apply it here

Concrete adaptations to our context, our team, our constraints

What we need to be autonomous

Skills, allies, resources, decisions still to secure

Each participant fills a copy. Then debrief together to surface patterns and next steps.
