Preparing the workshop · *Real estate market analysis*

G1 · Proof of Impact

Why this tool matters

Decoding the invisible economic gravity that pulls capital into a neighborhood, giving public actors the leverage to shape market forces rather than just suffering their consequences.

Evidence we produce

A comprehensive valuation report mapping property cycles, analyzing comparable sales, and estimating the marginal price impact of specific urban amenities.

Duration & Material

Duration · 4 to 6 weeks

Material · Land registry data, hedonic pricing algorithms, GIS property maps

Reference case

Hedonic pricing was utilized in Milan to value the social benefits resulting from the reopening of the Martesana canal, estimating the total economic value based on property price variations. Furthermore, analyzing the impact of rail transit station proximity on commercial property prices relies heavily on real estate market analysis, proving that localized infrastructure development acts as a massive driver for increased real estate valuation.

Suggested agenda · Brief (10 min) > Method walk-through (15 min) > Animation canvas (60-90 min) > Harvest (20 min)

Supply × demand × prices × yields

Duration
4 to 6 weeks

Supply pipeline

permitted · under construction

Demand drivers

population · employment · income

Price benchmarks

€/m² for sale × rent

Yield curves

gross · net · risk-adjusted

Harvesting our *learnings*

After running the canvas, capture three layers of insight.

What inspires me

Stand-out signals, surprising stories, ideas to remember

How to apply it here

Concrete adaptations to our context, our team, our constraints

What we need to be autonomous

Skills, allies, resources, decisions still to secure

Each participant fills a copy. Then debrief together to surface patterns and next steps.
