G2 · Proof of Fit

Why this tool matters

Inviting the wild back into the concrete grid, shifting from viewing nature as a decorative backdrop to recognizing it as the vital, living machinery that keeps the city breathing.

Evidence we produce

A spatially mapped green infrastructure network plan detailing selected nature-based interventions, accompanied by an IUCN-aligned criteria assessment and a long-term maintenance strategy.

Duration & Material

Duration · 3 to 6 months for mapping and criteria assessment

Material · IUCN Global Standard, GIS spatial mapping tools, climate vulnerability data, NbS selection matrices

Reference case

The IUCN NbS Global Standard was assessed in Mediterranean urban areas to deliver nature-based solutions effectively and verify their impact on climate adaptation,. In Copenhagen, green infrastructure was explicitly implemented to prevent flooding during massive cloudbursts, turning water management into a highly visible, attractive urban feature that simultaneously improved the social quality of public spaces.

Suggested agenda · Brief (10 min) > Method walk-through (15 min) > Animation canvas (60-90 min) > Harvest (20 min)

NbS catalogue · 6 categories × benefits

Duration
3 to 6 months for mapping and criteria
assessment

Urban forests

shade · biodiversity · CO₂

Green roofs & walls

insulation · stormwater

Bioswales / rain gardens

runoff · biodiversity

Constructed wetlands

water treatment · habitat

Permeable surfaces

flood mitigation

Restored riverbanks

ecology · resilience · leisure

Harvesting our *learnings*

After running the canvas, capture three layers of insight.

What inspires me

Stand-out signals, surprising stories, ideas to remember

How to apply it here

Concrete adaptations to our context, our team, our constraints

What we need to be autonomous

Skills, allies, resources, decisions still to secure

Each participant fills a copy. Then debrief together to surface patterns and next steps.
